Setting

1. Connect the instrument according to the wiring diagram.
2. After power on, the instrument runs into a lamptest and returns back to the standard mode.
3. Pressing the **P**-key enters the program mode with indication of **P2** on the display.
4. Pressing the **P**-key and ▲-key simultaneously steps through the different program numbers.
5. Pressing ▲ or ▼-key shows the current values.
6. To change values use ▲ or ▼-key.
7. The remaining values will be memorized automatically 7 seconds after the last touch of key with leaving program mode.

Additional key-functions in standard mode for indication of min/max values.

Simultaneously pressing of ▼ and ▲ key deletes and actualizes min/max-memory.
▲ key enters max-memory.
▼ key enters min-memory.

Instructions

After power on the instrument with his inbuilt microcontroller starts with an initialprogram activating lamp test and readout of memorized parameters in an EEPROM.

The following diagrams are showing the switching operation of PVE4 relay contacts. The hysteresis is free programmable.
There are two kinds of operation:

Example: operation current

Setpoint
on
drop-out ▼   ▲ pull-in
                              Display
off
Hysteresis

Example: quiescent current

Setpoint
on
pull-in ▲   ▼ drop-out
                              Display
off
Hysteresis

Operation current means that the relay will be pulled in if reaching the adjusted setpoint.
Quiescent current means that the relay will be dropped out if reaching the adjusted setpoint.

Program key **P**
MINUS key ▼
PLUS key ▲
The basic adjustments concerning to the following program example are the ground parameters after a total reset occuring through a power on with pressing **P**-key (see previous page).

Program advices:
Pressing the **P**-key enters **always** the program-mode with program number 2. The **P2** begins to blink in change with the current value after 3 seconds. Further 4 seconds, the system leaves the program mode and goes to the standard mode. In program mode pressing ▼ or ▲ -key selects the current values which are free scalable with both the keys. All the other parameters will be memorized automatically after leaving program mode.
